

# BPI-LBNCRDPSC

## VISION

A recognized and leading Research Development and Production Support Center for lowland vegetables.

## MISSION

Generate crop farming technologies and produce quality seeds of lowland vegetables to ensure sustainable production.

## CORE VALUES

### SPICE IT!

**Service Orientation.** We are proactive and we value our clients.

**Professionalism.** We are competent and we abide with the government's Code of Ethics. We are fair and just in the delivery of our service to our clients and personnel.

**Integrity.** We are transparent, honest and accountable for our actions.

**Commitment.** We work with passion and dedication.

**Excellence.** We produce the best results.

**Innovative.** We find new solutions.

**Teamwork.** We exercise partnership and camaraderie.

*Inihanda nina:*

Herminigilda A. Gabertan, PhD/Agricultural Center Chief IV  
Lorna M. Tepper/Senior Agriculturist

Meanne P. Andes/Engineer II  
Jamil P. Cruz/Project Assistant II

## GABAY SA PAGHAHANDA NG “NATURAL FARMING CONCOCTIONS”

## PAGHAHANDA NG IBA'T-IBANG “NATURAL FARMING CONCOCTIONS”

### Fermented Plant Juice (FPJ)

Ang FPJ ay mula sa mga parte ng halaman gaya ng bagong usbong na dahon ng kakawate o madre de cacao (*Glicicidia sepium*), kamote, kamoteng kahoy, madre de agua at iba pa.

1. Kumhuha ng sariwang dahon (ie. kakawate)
2. Tadtarin ito ng maliliit upang mas madaling iproseso
3. Lagyan ng molasses o asukal at haluing mabuti

4. Takpan ng tela o papel/plastic na may maliliit na butas
5. Matapos ang 7 o 14 araw, kunin ang katas saka ilagay sa plastik o bubog na botelya/basyo

#### DAMI NG KAILANGANG MATERIALES

Sa bawat 4kg na dahon ay kailangan ng 2L molasses o 2kg na asukal (brown)

### Fermented Fruit Juice (FFJ)

Ang FFJ ay mula sa mga tira tirang prutas na binuro o dumaan sa proseso ng fermentation. Ito ay mabuting pangkondisyon ng lupa at mataas sa potassium na mahalaga sa pagpapatamis ng bunga ng halamang namumunga.

1. Mangolekta ng prutas (maari ring gamitin ang banana corm)
2. Gayatin o pagpira-pirasuhin
3. Laygan ng asukal/molasses at haluin
4. Takpan ng tela o papel/plastik na may maliliit na butas

#### DAMI NG KAILANGANG MATERIALES

Sa bawat 1kg prutas, laygan ng 1L molasses o 1kg na asukal (brown)

### Fish Amino Acid (FAA)

Ang FAA ay mula sa binurong isda o bahagi ng isda na hindi na maaring kainin (fish trash)

1. Mangolekta ng isda o mga bahagi nito na di na makakain
2. Laygan ng asukal/molasses at haluing mabuti
3. Takpan ng tela o papel/plastik na may maliliit na butas

4. Matapos ang 7 o 14 araw, kunin ang katas
5. Ilimbak ito sa plastic o bubog na botelya na itabi sa tuyo at malamig na lugar

### Indigenous Microorganisms (IMO)

Ang IMO ay nagtaglay ng maraming beneficial microorganisms na nakatutulong magkondisyon ng lupa at nakatutulong upang malabanan ang mga soil-borne pathogens na nagiging sanhi ng sakit ng halaman.

1. Ilagay sa isang lalagyan ang kanin at maghintay ng 5-7 araw hanggang magkaamag
2. Ihala sa may amag na kanin ang asukal/molasses
3. Takpan ng tela o papel/plastic na may maliliit na butas

#### DAMI NG KAILANGANG MATERIALES

Sa bawat 1kg lutong bigas, laygan ng 1L molasses o 1kg na asukal (brown)

### ORIENTAL HERBAL NUTRIENT (OHN)

Ang OHN ay mula sa iba't ibang herbs na binuburo upang maging pangkondisyon ng lupa.

1. Gayatin ang turmeric/herb
2. Laygan ng asukal/molasses at i-ferment na 7 araw
3. Dagdagan ng lambanog at muling i-ferment ng 10 araw saka katasin (ang unang extraction ay mabuti sa alagang hayop)

#### DAMI NG KAILANGANG MATERIALES

Sa bawat 5kg herb laygan ng 2L molasses o 2 kg na asukal (brown) at 1gal lambanog/natural
